

Ty2[®] STRAP

Steel Band Replacement

- High Tenacity Polyester Fiber(Made in USA)
- Unmatched Elongation Recovery
- Complies with Current Cargo Securement Regulations
- Retains Tension in the Most Extreme Cold/Heat Conditions

Ty2 Strap is ideally suited for unitizing loads and can be applied by hand tools, manual or pneumatic tensioners. Further, our strapping was designed with safety in mind. The rebounding of the strap when cut is virtually nonexistent with our bonded or woven strapping. Also, your installers will not have to deal with being cut while handling or disposing of our strapping. Lastly, our tensioning tools and strap coils / spools are lightweight and designed to be portable.

Utilizing high tenacity polyester fiber, Ty2 Strap is able to retain even tension across the strap to reduce deterioration, deformation and maximize the use of wire buckles safely. Engineered with the least amount of elongation available, Ty2 Strap is impervious to extreme weather conditions and vibratory damage. Our woven polyester strapping will retain strength and maintain tension even if the strap is damaged or even partially cut .
